ROBIT IN BRIEF

The competitive offering in drilling consumables

Robit Plc is a strongly internationalized growth company selling and servicing drilling consumables. The company's products are favored by global customers for applications in mining, surface drilling and foundation, underground construction, and well drilling. Drilling consumables are Robit's one and only focus.

The company's offering is divided into three product and service ranges: Geotechnical, Down the Hole, and Top Hammer. The products are known for their high quality, excellent drilling results, and performance, achieved by the latest technology.

Robit has its own sales and service points in eight countries, as well as an active dealership network, through which it sells to more than 100 countries. The manufacturing units are located in Finland, South Korea, Australia and UK, which guarantee short and precise deliveries.

Robit is listed in Nasdaq Helsinki Ltd's marketplace with trading code ROBIT.

For more information, see www.robitgroup.com

PRODUCT LINES

Geotechnical

Robit's Geotechnical business line focuses on geotechnical applications, particularly anchoring, micropiling and underpinning, piling, and well drilling. Geotechnical applications are most commonly related to drilling done before or as a part of a construction process. Our selection contains a wide variety of specialized hammers, drill bits and ring bits, as well as advanced casing systems for all your needs.

Down the Hole

The Down the Hole business line covers all operations related to the down the hole drilling method. The main product categories consist of DTH hammers, DTH bits and DTH tubes. The selection is competitive and encompasses top quality products for all your drill & blast applications.

Top Hammer

Robit Top Hammer business line covers all applications in construction, quarrying and mining, blasting, and forepoling, from the softest to the hardest of rock conditions. Underground construction is one of the most important customer segments for Robit bits, and applications such as drifting and bolt hole drilling are well catered for, as well as patented RoX top hammer casing systems for tunnelling support. The selection is wide and encompasses products such as drifting and tunneling bits, reaming equipment, bench and production drilling bits, rods, shanks, couplings, and auxiliary tools, such as button bit adapters.

We offer You:

- The highest quality in drilling consumables – Our focus is 110 % in drilling consumables.
- Excellent drilling results and performance – We have a lot of references.
- We emphasize short and precise deliveries from 4 factories – Robit also has comprehensive storages in every continent.

Robit is following together with its key customers the development steps of more powerful hydraulic drifters. Robit is modelling and simulating the dynamic forces and stresses, and innovates new solutions to meet the best performance, efficiency, and lifetime to fulfill drillers' needs.

MICROPILING, PILING, AND UNDERPINNING

Micropiling and underpinning are terms relevant to construction. They all have to do with building, stabilizing, and/or strengthening foundations, with underpinning being more of an umbrella term for different methods, while micropiling and piling describe some of those methods.

During decades and centuries of continuous urbanization, the best, most solid and thus suitable ground for construction has often been already populated or utilized for some other purpose. The remaining softer ground conditions require a stabilizing technique before construction, which is where underpinning comes into play. There are several other techniques under the umbrella of underpinning, however, micropiling and piling are the ones most centered on drilling. They are also the most versatile of the lot, and some of the more reliable ones.

Micropiling and piling involve drilling high-durability steel casings into considerable depths. They are usually driven through the overburden until the design depth, where they reach the solid bedrock. Once the desired depth has been reached, the drill with the drill bit is removed, leaving the steel casing into the ground. After this, a reinforcing bar is inserted into the casing, extending all the way to the surface, and the casing is filled with high-strength cement grout that surrounds the reinforcing bar.

Drilled piles made with Robit® Casing Systems have significant advantages compared to other piling methods and systems. These benefits include fast drilling with maximum straightness of the hole, reliability to reach the targeted depth, and extreme simplicity of use.

WELL DRILLING

Well drilling, which is often also referred to as casing drilling, is used in making water and thermal wells in broken overburden conditions. The process is principally the same as when looking to extract other natural resources, such as oil or natural gas, from the ground. It involves drilling a hole into the ground using a rig outfitted most commonly with a top hammer (TH) or a down the hole hammer (DTH), although sometimes also rotary drills may be used.

For water well drilling, the drill bit is driven through the soil until the ground water table, and then below that to make sure that the well has enough water to work with and will continue to provide water for a long time. When drilling a geothermal well, the end of the pipe is driven deep into the bedrock to extract the heat from it. The bit is followed by a steel casing that will stay in the hole, ensuring its straightness and supporting its walls. In softer rock, the casing is a vital part of the construction, as it prevents the collapse of the hole during drilling and protects the water below from contamination or the blockage of the heat distribution. In hard enough rock, such as the one mostly found in Scandinavia, the casing is drilled only 2-3 meters into bedrock, after which no extra support is needed, and the drilling continues with a standard DTH drill bit. Once the drilling is done, either a water pump or a heat pump system is installed.

Robit® Casing Systems allow easy driving of the casing tubes into the ground with relatively low torque demand. The casing is left in the ground as a protection pipe of the water or thermal well. The WH Series Hammers offer excellent performance in a variety of rock conditions.

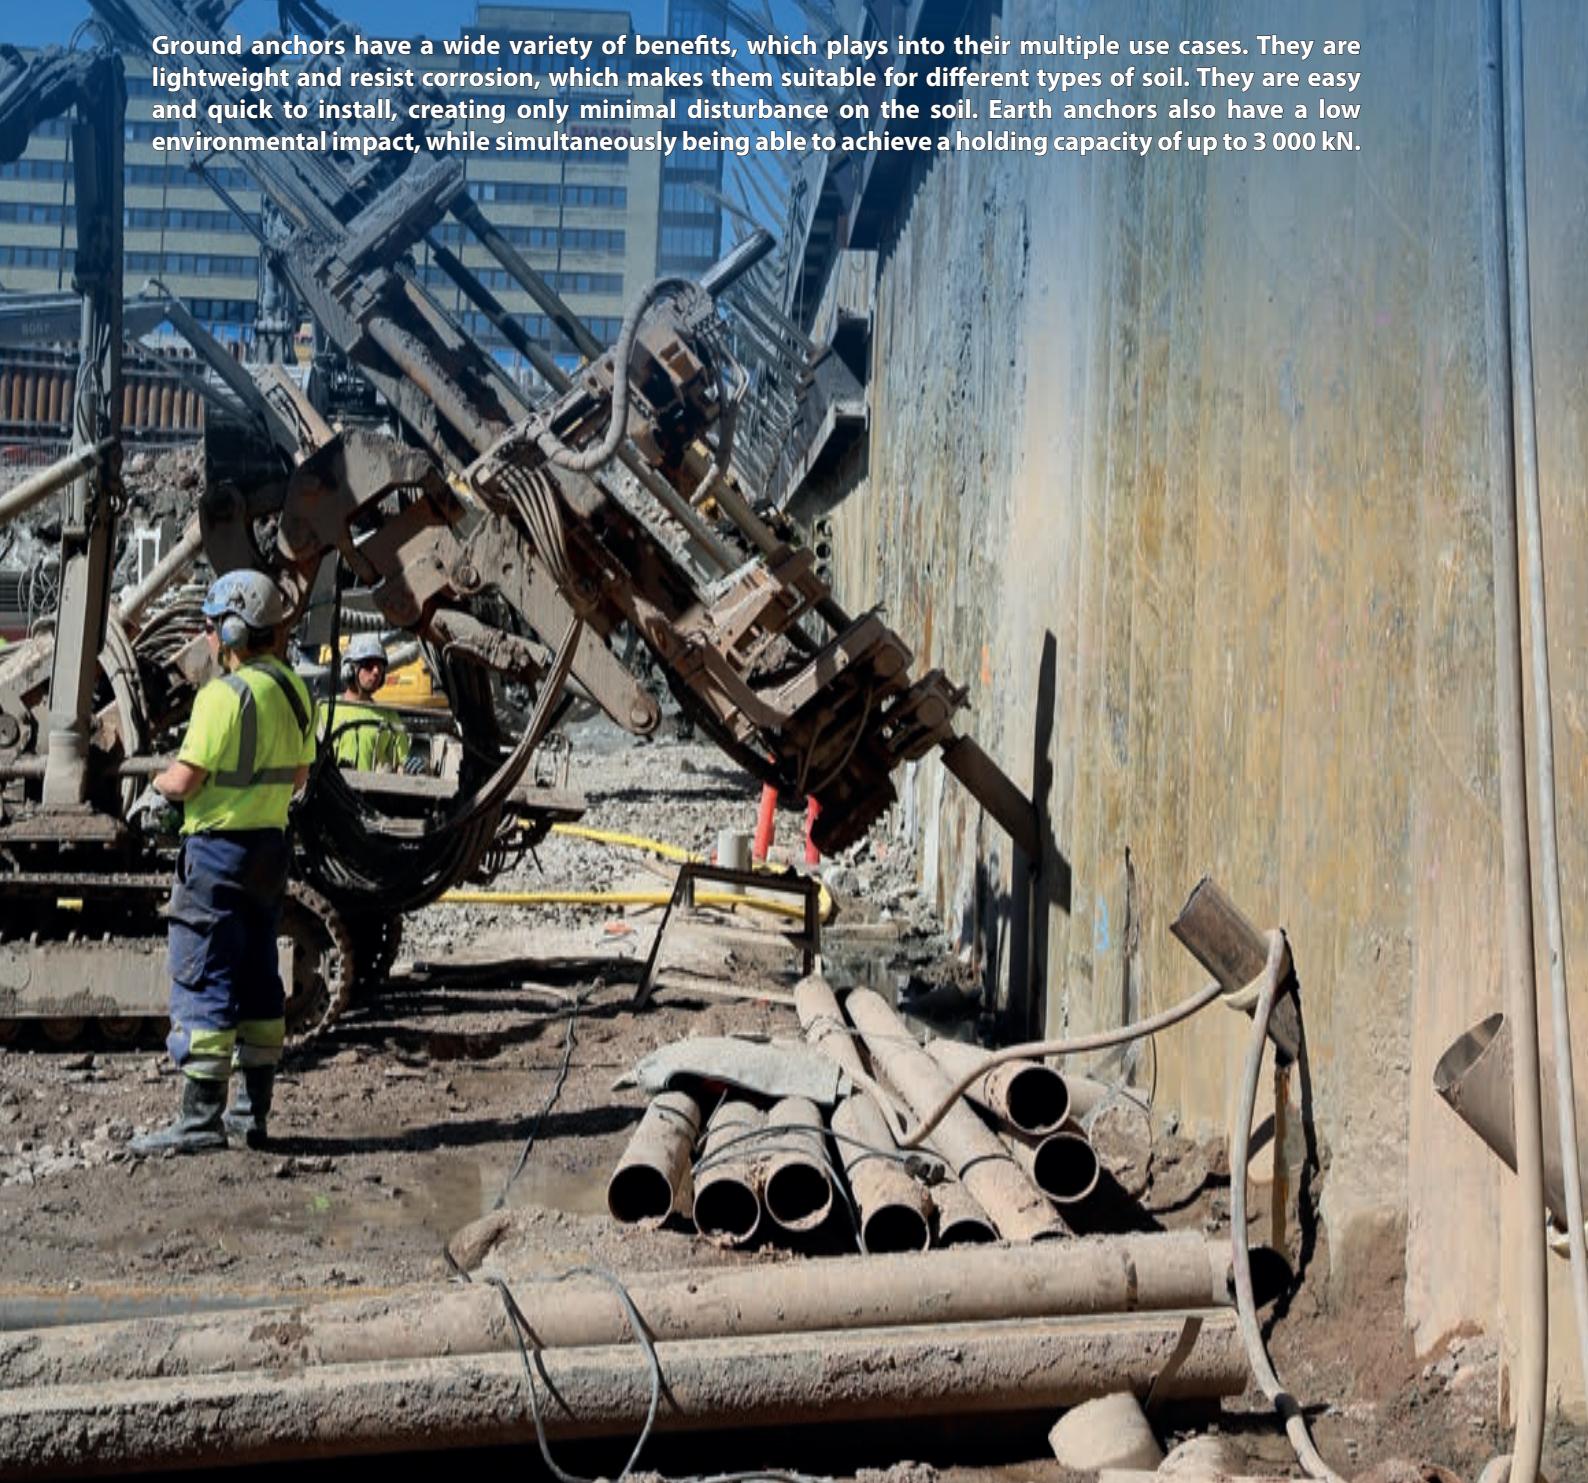

ANCHORING

Anchoring is a method used in construction, where walls with masses of overburden are anchored to the solid rock using steel casings filled with grouting. This can be used to anchor great masses to the bedrock. Anchoring increases the stability and durability of the construction by transferring both tension and shear forces. These structures are also known as ground anchors or earth anchors, and they come in different forms and sizes that can be used to support buildings or civil engineering and other structures.

To start, casing tubes are driven through the already laid overburden, using special casing systems. Once the casings are in place through the wall, the drilling can proceed with a ground or rock drill bit. After this, the drill will be driven deep enough into the bedrock or the ground beyond the overburden walls; the depth is usually defined by the weight the anchor is supposed to support and the quality of the ground or rock. Finally, to finish the anchoring, a steel cable is inserted to the bottom of the hole and the hole is filled with grouting.

Ground anchors have a wide variety of benefits, which plays into their multiple use cases. They are lightweight and resist corrosion, which makes them suitable for different types of soil. They are easy and quick to install, creating only minimal disturbance on the soil. Earth anchors also have a low environmental impact, while simultaneously being able to achieve a holding capacity of up to 3 000 kN.

Competitive offering in Geotechnical drilling consumables

Patented Casing Advancing Systems with spiral locking. Sizes from 114,3 mm up to 1524 mm. Wide range of ring bit, wing bit, eccentric and drill through models. Proven quality worldwide – references in all applications.

Efficient DTH Bits – For drilling blast holes, wells; for general purposes as well as RC models for sampling. Robust designs for achieving maximum penetration rate in hard and abrasive rock conditions.

Robust DTH Hammers – Wide range of all sizes of blast hole, general purpose, well drilling, and reverse circulation hammers. Hammers have robust design as well as minimized fuel consumption and optimized air flow with the highest performance.

Reliable Shock Absorbers – Efficient dampening available for hammers from 2" up to 33".

Strong Drill Pipes – Single pipes available from OD 76 mm up to 323 mm sizes and double pipes from OD 406 mm up to 1220 mm. Tool joints API reg. and HEX standards.

Wide range of Accessories – Wide range of subs, check valves, hammer sleeves, air hoses, and chain keys. Ask for more: sales@robitgroup.com

Proven quality – manufactured with automated production lines

- Robust design for abrasive ground conditions
- High penetration rate in hard rock
- Patented spiral locking system for casing systems
- Drill through technology in piling

**Reliable partner**

Competitive offering in drilling consumables – Proven quality – Customization for project needs – Drill master service – Solving drilling challenges and problems
– Experience – References

	SF (Steel Fist)	DF (Direct Flush)		
	REC			

Robit Flow Control System

Background:

Experts have voiced growing concerns about compressed air escaping into certain ground conditions when drilling with DTH hammers in urban areas, close to existing structures.

- Overdrilling in *soft, sandy formations* often removes more material than anticipated, changing the ground's characteristics
- In *clay formations*, air may travel long distances and disturb the soil

Conventional Flushing

Flow Control

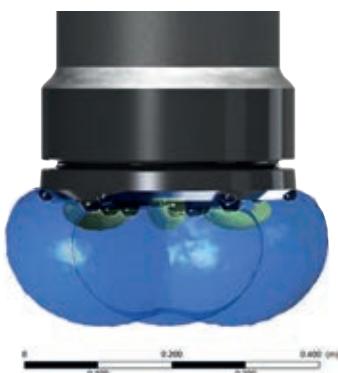

Method:

Robit has developed the Flow Control system, which ensures efficient flushing without compressed air escaping into the surrounding ground.

- The main air flow is directed from the pilot bit straight to the outlet channels inside the casing so that a vacuum effect is created
- The ring bit runs ahead of the pilot, which also prevents the air from escaping into the surrounding ground
- The inclined air channels in front of the pilot take care of sweeping drill cuttings to flushing outlets and enable effective drilling
- Advanced Computational Fluid Dynamics (CFD) analysis has been used to optimize and verify the flushing properties of Robit® Flow Control technology
- Distributed air jet concept, with smaller channels in the pilot face, provides superior flow control with varying operating pressures
- Air flow always finds a path of least resistance that can be observed from the analysis of comparison design

Direct Flushing

Robit® Flow Control

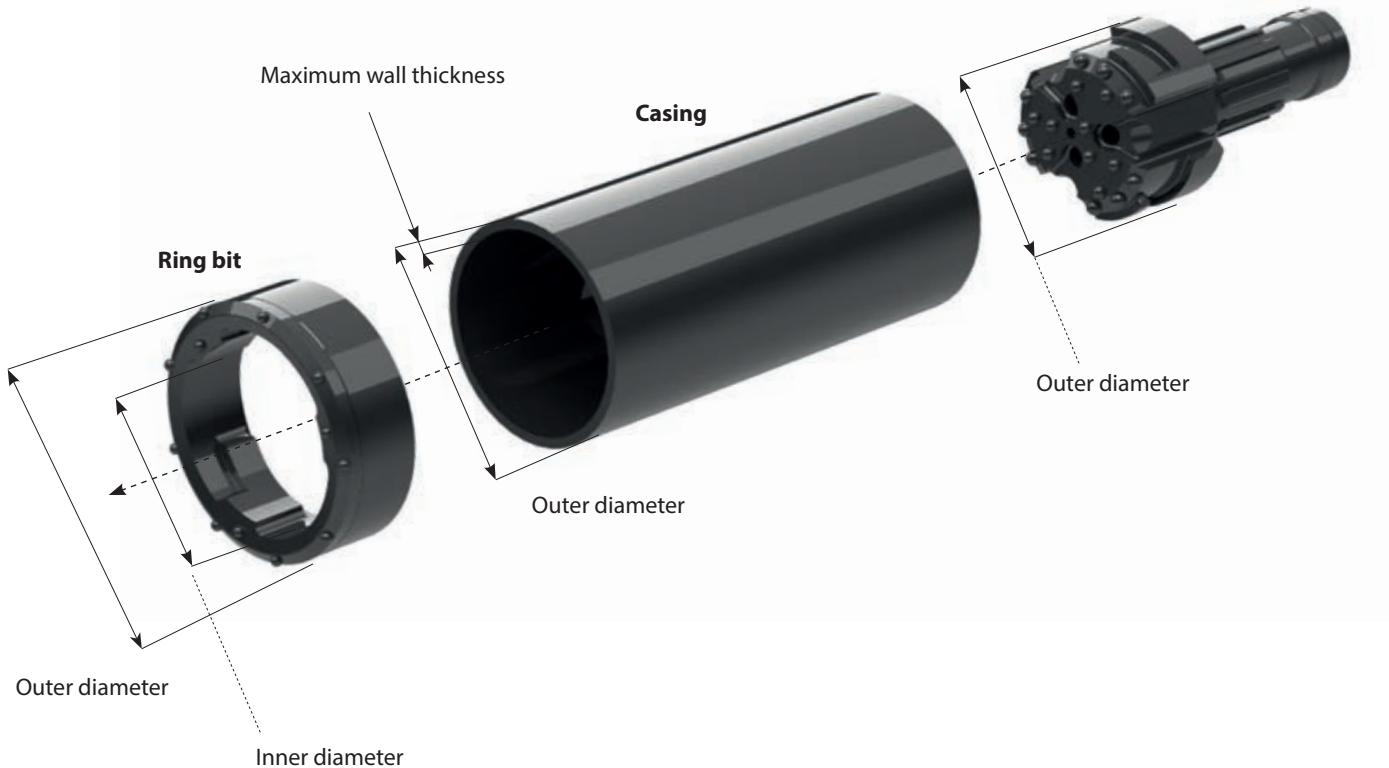

Result:

Robit® Flow Control system is optimized for effective drilling and preventing air from escaping into the ground.

- Conventional flushing causes three times bigger cavern size, where the flowing air disturbs the ground, in comparison to the Robit Flow Control model
- Competing models have approximately 20% bigger cavern size, in comparison to the Robit Flow Control model

Drilling with casing systems

1. Pulldown/Feed force

The moderate pulldown force on pilot is 9 kg/ring bit OD in mm (500 lbs/inch)

2. Rotation speed

Normal operating RPM is 7620/ring bit OD in mm (see chart 1.)

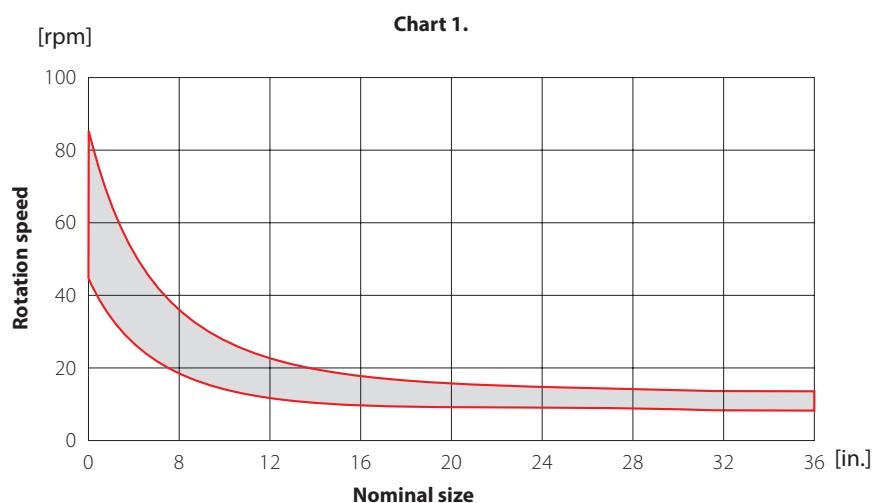

3. Compressor pressure

Normal operating pressure is from 12 to 15 bar or 180 to 225 psi. Note: in loose formation (i.e. sand) compressor can be set to 7 bar or 100 psi

4. Flushing

Drill exhaust air passes through the bit to clean the bit face and carry cuttings to the surface up the annular space between the drill pipe and the casing tube. Air velocity varies from 12 to 18 m/s between drill rod and casing.

Drill rod and casing gap is typically ~50 mm under Ø406 mm systems. With the bigger diameters the gap will grow.

EXAMPLE DRILLING PARAMETERS

DTH Nova

Product	DTH Nova 168.3-6
Rock / Ground conditions	All rock and ground formations
Application	Well drilling
DTH hammer size	5"
Rotation speed	30 - 40 RPM
Torque	1500 - 2000 Nm
Compressor output	15 - 24 m ³ /min 530 - 848 CFM
Compressor pressure	10 - 16 bar

NOTE: Parameters may vary depending on ground / rock conditions, application, and machinery.

DTH SF

Product	DTH SF 323.9-12.7
Rock / Ground conditions	Homogenous soil with small boulders
Application	Piling and Pipe-Pile-Wall
DTH hammer size	8" - 10"
Rotation speed	15 - 25 RPM
Torque	7000 - 10000 Nm
Compressor output	24 - 33 m ³ /min 848 - 1165 CFM
Compressor pressure	10 - 14 bar

NOTE: Parameters may vary depending on ground / rock conditions, application, and machinery.

DTH Prime

Product	DTH Prime 609.6-19.0
Rock / Ground conditions	All rock and ground formations
Application	Piling
DTH hammer size	18"
Rotation speed	10 - 14 RPM
Torque	2200 - 2900 Nm
Compressor output	57 - 103 m ³ /min 2000 - 3670 CFM
Compressor pressure	11 - 15 bar

NOTE: Parameters may vary depending on ground / rock conditions, application, and machinery.

CASING SYSTEMS FOR PILING

Casing Systems for Piling

Top-quality casing systems for piling operations under various challenging conditions. Includes systems with drill-through capabilities, solitary ring bits for economical drilling, and a Steel Fist system, which requires no ring bit. Robit piling products are designed to work with a wide range of casing wall thickness (6-25.4 mm).

Suitable applications:

- Piling
- Micropiling
- Underpinning
- Pipe-Pile-Wall installation

Robit® DTH Prime

Robit® DTH SR

Robit® DTH SF (Steel Fist)

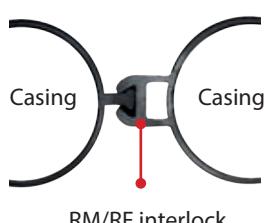

XL2 MODELS FOR INSTALLING PIPE-PILE WALLS

Case: Finland, Helsinki Länsi-Metro, Koivusaari Subway Station Pipe-Pile-Wall Piling Project with Robit® DTH SF XL2 609,6/16

The most reliable application for challenging conditions

Robit has a versatile tools for building steel foundation in the most demanding conditions. When it's matter of structures that require maximum horizontal or vertical load-bearing capacity, faster implementation of retaining walls or extremely wet soil conditions, Robit® Casing Systems for Pipe-Pile-Wall is the right solution. Drilling with Robit® Casing Systems down to the bedrock, steel pipes are connected one by one each others with pre-welded interlocks building up a waterproof wall. Pipe pile walls have also excellent bending stiffness and resistance. Robit® Casing Systems for Pipe-Pile Walls are suitable for using for example in the following applications: retaining wall structures, building foundations, wharves and piers, road and railway structures, bridges.

When using XL2 ring bits, drilling drives the space for pre-welded interlocks. With the same pilot bit, it's possible to pile both standard and XL2 ring bits.

XL2 MODELS FOR INSTALLING PIPE-PILE WALLS

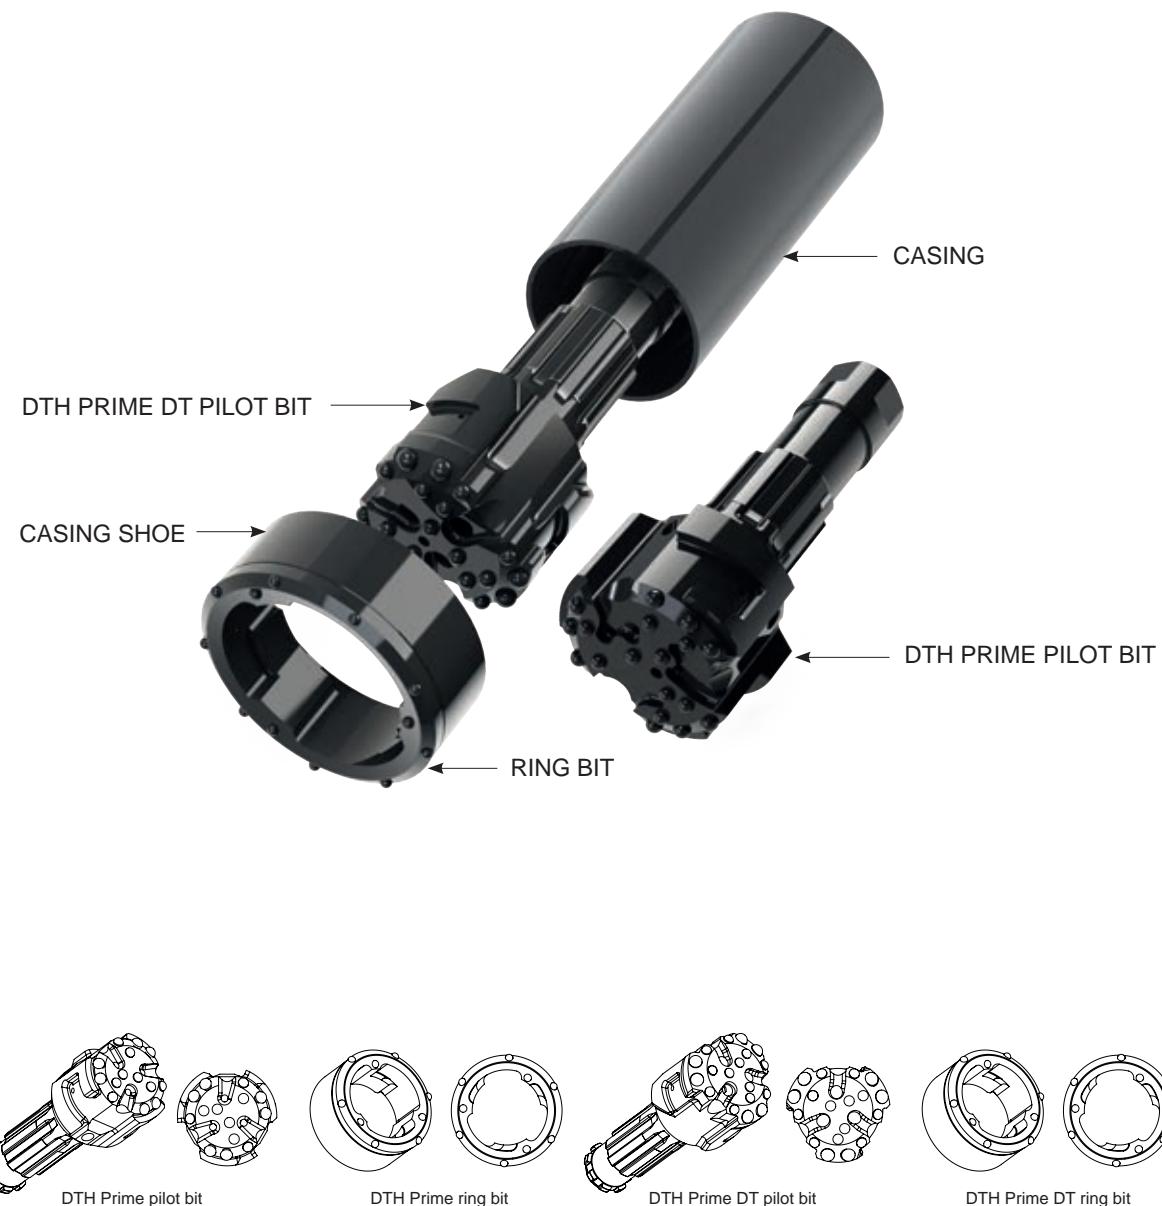

Case: Estonia, Paldiski New Northern Port Combi Wall Piling Project with Robit® DTH SF 1020

DTH Prime

Durable piling solutions for demanding conditions

- Available for piling applications ranging from 114,3 to 1524 mm
- Allows for the drilling of both threaded and welded casing tubes with the same ring bit
- Pile coupling structure makes fitting and welding easy
- Ring bit carry capacity guaranteed to exceed the burden of maximum casing grades (S550)
- Enhanced ring bit durability, thanks to large gauge buttons
- Optimized flushing grooves for the toughest of conditions
- Optional Flow Control model minimizes air escaping to the surrounding ground
- Reliable spiral locking mechanism
- Prime DT pilot allows for continuing drilling through the ring assembly

DTH SR

Solitary ring system for down the hole hammer

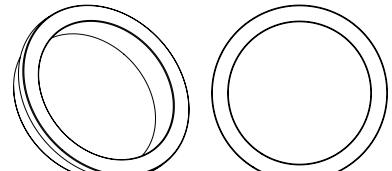

- Economical and cost-effective to use in homogenous ground with few small boulders
- Install piles and interlocked Pipe-Pile-Wall piles with the same pilot by using different ring bits
- Available for all the common Down The Hole hammers
- Can be used for all applications where the casing is left in the ground
- Designed for piling, underpinning, and micropiling applications

DTH SF (STEEL FIST)

Steel Fist system for down the hole hammer

- Designed for specific piling operations, sizes from 273 mm up to 1220 mm
- New economic way for traditional piling work
- Capable of installing water-proof Pipe-Pile-Walls
- No ring bit is needed when piling with DTH SF
- Usage in homogenous soil conditions with small boulders
- Available for all the common Down The Hole hammers
- Can be used for all applications where the casing is left in the ground
- Ideal for piling and installing Pipe-Pile-Walls

CASING SYSTEMS FOR WELL DRILLING

Casing Systems for Well Drilling

Versatile casing system solutions, which are centered around well drilling but offer excellent choices for also other operations. Choose between integrated ring bit system for challenging conditions and an eccentric system for overburden drilling. Well drilling systems are optimized for thin wall casing offering maximal drill-through diameter.

Suitable applications:

- Water well drilling
- Thermal well drilling
- Micropiling
- Dam and port projects

Robit® DTH Nova

Robit® DTH-REC

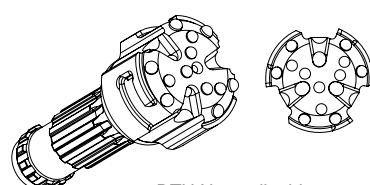

picture: Rototec

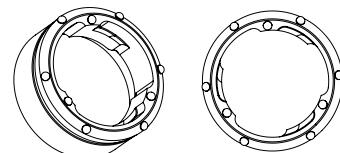

DTH Nova

Single-use system for down the hole hammer

- Ideal for overburden that is thick and full of boulders
- Enables easy, fast, and reliable drilling process in all conditions
- Available for all the common down the hole hammers
- Designed for all applications where the casing is left in the ground
- Highly suitable for the drilling of both water wells and thermal wells

DTH-REC

Robit® Overburden Eccentric System

- Designed to offer maximum reliability in overburden drilling conditions
- Enables driving the casing in all downward vertical directions/formations
- Helps avoid collapsing holes and lost equipment
- A two-piece bit, consisting of a concentric pilot bit and a swing-out eccentric reamer
- Enlarges the hole's diameter driving the casing down into the hole
- Reamer can be retracted by applying reverse rotation
- Full system can be pulled out and used again
- Ideal for water well and geothermal drilling, micropiling, as well as dam and port projects

MULTI-PURPOSE CASING SYSTEMS

Casing Systems for Multi-purpose Systems

Durable casing systems specifically designed for applications where the casing has to be removed from the ground. Created for extremely demanding conditions.

Suitable applications:

- Piling
- Anchoring
- Site investigation

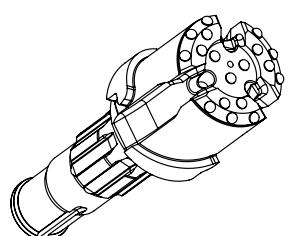

Robit® DTH-RoX MU

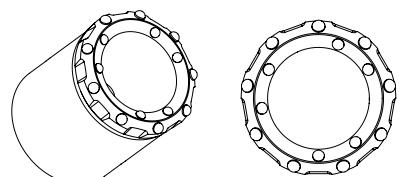

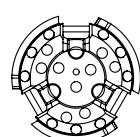

DTH-RoX MU

Multi-use system for down the hole hammer

- Made for applications where the casing has to be removed from the ground.
- Designed to meet durability standards for removable equipment
- Double groove design* in the casing shoe
- Made using the best materials available
- Available for all the common down the hole hammers
- Ideal for piling, anchoring, and site investigation

DTH BITS

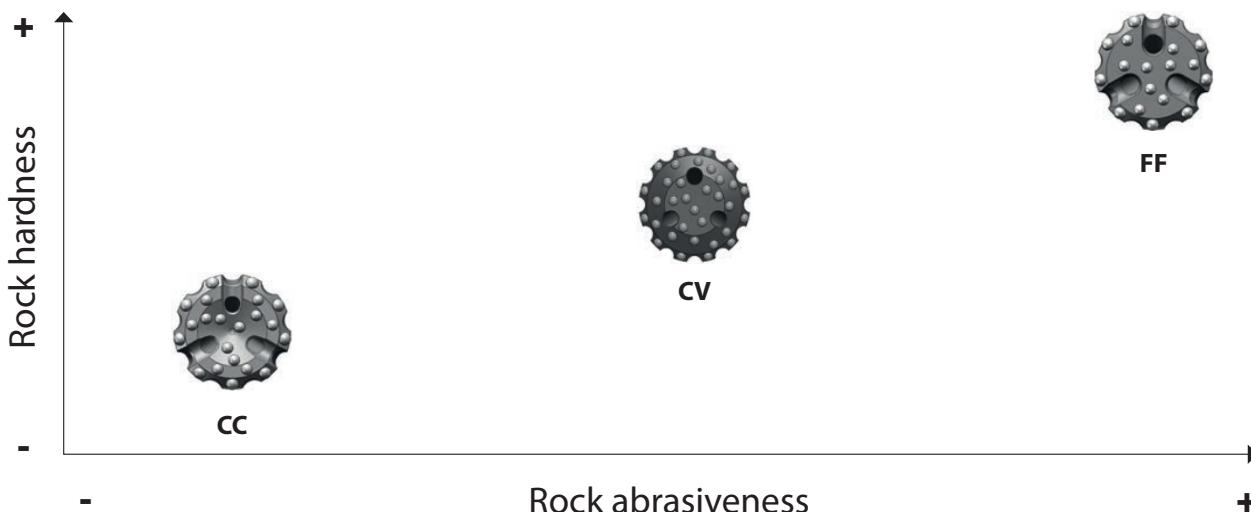

GENERAL PURPOSE BITS

DTH Bits

BIT SELECTION GUIDE

Geotechnical

DTH Bits

Conventional Bits

Flat Face - FF

- Common face design in global market
- Excellently performing bit
- Hard to very hard rock
- Solid consistent formation

Concave - CC

- Common face design in global market
- Excellent deviation control
- Medium hard to hard rock
- Broken and sloped angled formation

Convex - CV

- Common in global market
- Excellent penetration rate
- Medium / hard formation
- Shales / sandstone formations

New DTH Drill Bit Description

Example: DTH BIT 165 QL60 FF H1

DTH BIT	165	QL60		FF		H	1
Product Group	Head Diameter	Shank Type	Footvalve	Face Type	Other	Carbide Profile	Carbide Grade
DTH BIT	165	DHD3.5	TL = Tubeless	FF = Flat Face	RET = Retention	H = Hemispherical	1 = Majority of Applications
DTH HAMMER		TD40	Blank = Standard Footvalve	CC = Concave	GEN2 = 2nd Generation	SB = Semi Ballistic	2 = Very Hard Ground
DTH PIPE		DHD340		CV = Convex		FB = Full Ballistic	3 = Underground Iron Ore
		QL50		DC = Drop Center		C = Conical	4 = Very High Abrasive
		DHD350		XHF = Extra Hard Formation			5 = Polycrystalline Diamond
		QL60		HFDC = Hard Formation Drop Center			
		DHD360		DRG = Double Gauge Row			
		QL80					
		DHD380					

If different carbide profile or grade in gauge and face, then 1st code will represent the gauge, 2nd the face

DTH HAMMERS

Hyper series hammers

Well drilling hammers

DTH Hammers

DTH HAMMERS CODES

Hyper series for general purpose drilling

- Robust hammers of simple design to provide maximum performance with minimal maintenance
- Offered in a wide range of sizes 1"-33"
- Used globally e.g. in demanding construction and foundation projects

WH series for well drilling

- Extra heavy duty hammers designed specifically for deep hole drilling and use with high pressure compressors
- Minimized fuel consumption
- Optimized air flow

HYPER SERIES HAMMERS

BR2

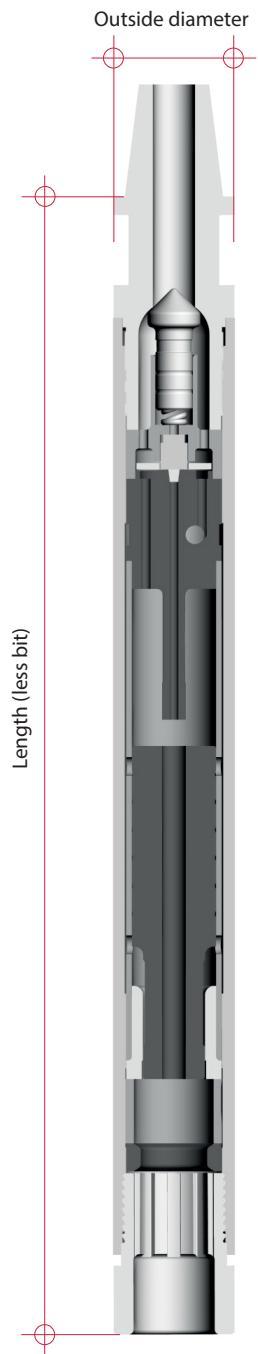

Hammer 70 mm (2 ¾") - 80 mm (3 ½") diameter holes

Valved hammer for high performance at low operating air pressures

- Robust and reliable
- Standard box with pin backheads (alternatives available upon request)
- RD50 and BR2 threads
- Positive fitting check valve to guard against the ingress of ground water debris

Component parts

Ref	Description	Part number
1	Wear Sleeve	HSB2S00
2	Inner Cylinder	HSB2S01
3	Bearing	HSB2S02
4	Piston	HSB2S03

HYPER SERIES HAMMERS

HYPER 331

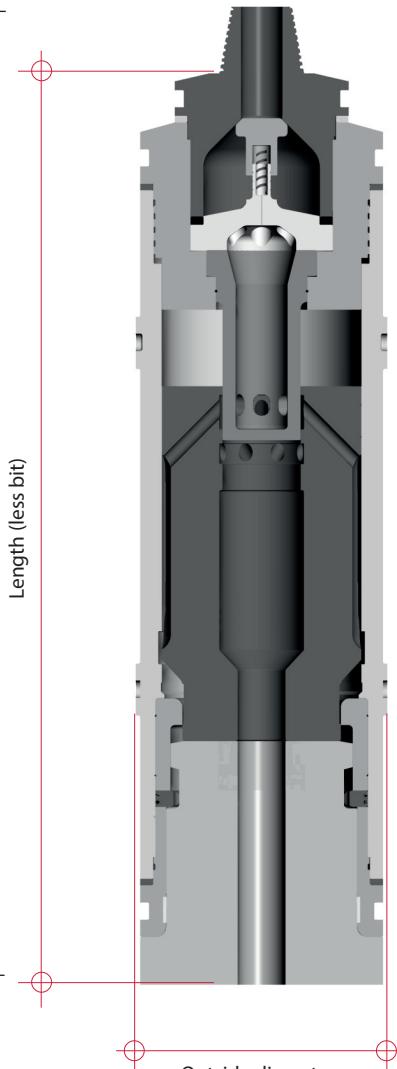

Hammer 838 mm (33") - 1320 mm (52") diameter holes (other sizes available upon request)

A reliable hammer designed to perform over a wide range of operating air pressures

- HEX275 pin backhead (alternative connections available upon request)
- Designed to transfer maximum energy to the button bit
- Supplied with a highly durable shank as standard

WELL DRILLING HAMMERS

WH4 HP TD40 2 3/8" API REG

Hammer 110 mm (4 3/8") - 127 mm (5") diameter holes

The new HP version features a heavier piston, lower air consumption, and an improved ROP

- Optimum performance at medium to high pressures ranging up to 35 bar (508 psi)
- Standard 2 3/8" API reg. pin backhead
- TD40 bit shank fitting

Hammer oil

Usage

Robit AC Bio RockDrill oil has been specifically designed for drilling operations in all rock and soil conditions. It fulfills the OECD 301F requirements for bio oils and it is available in two solutions of different strengths.

Features

Robit AC Bio RockDrill oil has excellent lubrication properties, granting optimally low friction and wear rates.

The oil combines a renewable bio base with a unique mix of additives and enhancers, offering superior protection against corrosion and great features for any conditions.

The oil retains its flow and can be pumped even in cold environments, guaranteeing solid lubrication. Can be poured in temperatures as low as -35°C.

Safety

The oil is free of toxins, will not irritate skin or eyes.

The product has very high boiling and flash points.

Robit AC Bio RockDrill oil is an excellent fit for drilling applications where the lubricant may bleed into the environment.
